

CS 465 Milestone Two Guidelines and Rubric

Overview

It's best practice to document your plan for full stack development as you progress through a project. The Software Design Document (SDD) is an engineering document that contains technical specifications and written descriptions. You will complete several components of the SDD to provide a more detailed illustration of the system architecture for the Travlr Getaways website.

This milestone is intended for you to finish the diagrams that you will deliver to your client, Travlr Getaways. Specifically, you will create a diagram called a sequence diagram, which demonstrates the flow of communication; complete a Class diagram that illustrates the JavaScript classes used in the application; and fill in a table that demonstrates your understanding of endpoints in the web app. For each of these illustrations, you will produce written explanations. Keep your audience in mind and be sure to communicate clearly and concisely in client-facing technical documentation.

Please note: You already started your work in the SDD for Travlr Getaways in Milestone One. You will continue to build upon this document in this milestone, and later deliver the final product as part of your project submission.

Prompt

Continue your work on the SDD for Travlr Getaways by using the partially completed SDD you submitted in Milestone One. Prepare a written explanation of the work you've produced on the full stack application thus far by completing the following sections of the SDD:

System Architecture View

- **Sequence Diagram:** Illustrate the flow of logic in a web application by completing a sequence diagram using the [Sequence Diagram Template in Lucidchart](#).
 - You will not be able to edit the template. Rather, you must click File, then Make a Copy to edit and save the document in your Lucidchart account. When editing the sequence diagram, be sure to **label the highest level of organization properly** using the following options:
 - Controller/Model
 - Route
 - Browser/View/Template
 - MongoDB
 - HTTP Client
 - Controller
 - Please note: Labels may be used more than once.
 - Save the completed sequence diagram as an image file (PNG or JPEG) and insert the image in the **System Architecture View: Sequence Diagram** section of the SDD.

- Below the diagram, be sure to **describe the flow of logic in the web application** based on the sequence diagram.
- **Class Diagram: Illustrate the JavaScript classes of the web application by completing a class diagram for the web application** using the [Travlr Class Diagram Template in Lucidchart](#).
 - You will not be able to edit the template. Rather, you must click **File**, then **Make a Copy** to edit and save the document in your Lucidchart account. Consider typical travel components and use them to label the diagram correctly. Edit the class diagram and label the class titles properly using the following options:
 - Itinerary
 - CruiseInfo
 - TravellerInfo
 - FlightInfo
 - HotelInfo
 - TripInfo
 - Membership_Admin
 - HotelBooking
 - CruiseBooking
 - FlightBooking
 - Travel_Agent
 - MemberAccount
 - Save the completed class diagram as an image file (PNG or JPEG) and insert the image in the **System Architecture View: Class Diagram** section of the SDD.
 - Below the diagram, be sure to **describe the JavaScript classes of the web application** based on the class diagram.

Interfaces

- **API Endpoints:** Exposing RESTful endpoints is a design approach to enable an application to participate in a larger ecosystem. In the API Endpoints table provided in the SDD, document each endpoint including the HTTP method, purpose, URL, and any relevant notes.

What to Submit

Continue building on the SDD you submitted in Milestone One. Complete the following sections: System Architecture View: Sequence Diagram, System Architecture View: Class Diagram, and the API Endpoints table. Submit this iteration of the SDD with all the necessary components.

*Please note: You will only be graded on the sections relevant to Milestone Two that are outlined in the rubric below. Although it may be helpful to implement feedback from your instructor on aspects that were outlined in Milestone One, it is not required for **this** assignment submission. Each section will, however, be submitted and reassessed in your final Project submission later in this course.*

Milestone Two Rubric

Criteria	Meets Expectations (100%)	Partially Meets Expectations (70%)	Does Not Meet Expectations (0%)	Value
Sequence Diagram	Illustrates the flow of logic in a web application by completing a sequence diagram and providing a description of the diagram	Shows progress toward meeting expectations, but with errors or omissions	Does not attempt criterion	40
Class Diagram	Illustrates JavaScript classes for a web application by completing a class diagram and providing a description of the diagram	Shows progress toward meeting expectations, but with errors or omissions	Does not attempt criterion	35
API Endpoints	Documents each endpoint including the HTTP method, purpose, URL, and any relevant notes	Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include providing a deeper understanding of the purpose for producing multiple endpoints	Does not attempt criterion	15
Clear Communication	Consistently and effectively communicates in an organized way to a specific audience	Shows progress toward meeting expectations, but communication is inconsistent or ineffective in a way that negatively impacts understanding	Shows no evidence of consistent, effective, or organized communication	10
Total:				100%
