

CS 465 Module Six Assignment Guidelines and Rubric

Overview

In the final part of the project, you will use an Angular command line interface (CLI) to build components and a data service for the client-facing, front-end single-page application (SPA). In this assignment, you will design and build an SPA that renders a client-based webpage using Bootstrap CSS with admin features built in Angular with reusable UI components and logic. Angular offers several integrated tools to facilitate the build. Once the application is complete, you will test the functionality for displaying and editing trips.

Review the [Project Guidelines and Rubric](#) for this course as a refresher for the SPA requirements for TravlR Getaways' web application.

Prompt

You now have a working full stack application that serves the customer! Now, it's time to develop an SPA for your client that will produce rich functionality for administering the client database. You will create an add form for trips. In testing, if you add a new trip, you should see it in the database, trip cards, and Express Public website.

Follow the instructions in the Module Six Full Stack Guide linked in the Supporting Materials section.

Specifically, you must address the following rubric criteria:

- Develop the **Angular application structure** using TypeScript, HTML, and CSS. Specifically, you will need to complete the following actions:
 - Develop the Trip list component.
 - Refactor the Trip logic into a Trip card component.
 - Develop the Trip data service to interact with the API on the Express backend.
- **Make requests to the API server.** Retrieve and display a list of trips. Select one trip and edit it by updating its values and saving. Code the behaviors for the following queries:
 - POST
 - GET
 - DELETE
 - PUT
- Add appropriate **CRUD or REST methods** to the API backend.
- **Test Angular** in the browser and verify the RESTful API endpoints using Postman.

What to Submit

Submit the updated travlr.zip zipped file folder. In addition to the zipped file folder, you must submit the following screenshots as images to Brightspace:

- Card Listing showing an additional trip that you added
- Edit screen
- Update screen

Note: You will push your local Git repository module6 branch to your GitHub repository. This procedure will become second nature to you as you move through the course modules. In the end, you will have a full stack web application with branches that represent key stages of building a full stack application leading up to full project completion.

Supporting Materials

The following resource supports your work on this assignment:

Resource: [Module Six Full Stack Guide](#)

Follow the instructions in this guide to complete the assignment and support your development of the full stack web application.

Module Six Assignment Rubric

Criteria	Meets Expectations (100%)	Partially Meets Expectations (70%)	Does Not Meet Expectations (0%)	Value
Angular	Develops the Angular project structure	Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include improving integration with API backend	Does not attempt criterion	30
Requests to API Server	Creates the Trip class and services to make requests to API server	Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include additional trips	Does not attempt criterion	30
REST Methods	Creates additional REST methods to support add, update, and delete	Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include adding routes to the new method and coding the controller methods	Does not attempt criterion	20
Functional Testing	Tests the Angular Trip components using mock data	Shows progress toward meeting expectations, but with coding errors or omissions	Does not attempt criterion	10

Criteria	Meets Expectations (100%)	Partially Meets Expectations (70%)	Does Not Meet Expectations (0%)	Value
End User Testing	Runs the admin SPA with functionality according to the software requirements	Shows progress toward meeting expectations, but with errors or omissions; areas for improvement may include addressing errors to access the API to retrieve and send data or errors in the HTML forms	Does not attempt criterion	10
Total:				100%
